## (54) BOARD REARRANGING DEVICE FOR ELECTRONIC PART

(57)Abstract:

PROBLEM TO BE SOLVED: To rearrange a plurality of liquid crystal display elements which are transported out of alignment, into a single row in alignment about facing obverse and reverse and to the left and right.

SOLUTION: A first junction transport means 12 and a second junction transport means 13 are in series installed between a feed-in transport means 10 and sendout transport means 11 of a liquid crystal display element 1, which is turned about facing obverse and reverse by the second junction transport means 13 so that the facing of a plurality of such display elements 1 fed is put in alignment. A collet 16 is installed on a reciprocatory moving head, and the display element 1 in the feed-in means 10 is transported by the collet to the first junction transport means 12, and the left-right facing of the display elements 1 is aligned by 180-deg. rotation during collet movement.
